

Proposed pricing

Verity OS Risk | September 26, 2026 | USD | Subject to TSG approval

Design-partner pilot | \$4,500 fixed

60 days; up to 15 participants; one team; two sample onboarding journeys; two workflows; one report pack; two training sessions. Up to 24 service hours. Synthetic data until a private environment is approved. No automatic conversion.

PMO Team | \$750/month, billed annually

\$9,000/year + \$3,000 setup (up to 16 hours). Includes 25 active internal users, 25 active projects, three product-line portfolios, one tenant and 50 GB pooled storage. Additional active users: \$20/month each, co-termed annually.

PMO Portfolio | \$1,500/month, billed annually

\$18,000/year + \$7,500 setup (up to 40 hours). Includes 75 active internal users, 100 active projects, 15 portfolios, one tenant and 200 GB. Additional active users: \$15/month each, co-termed annually.

Enterprise / MGA Network | Custom quote

External partner access, private deployment and live connectors require a defined scope and acceptance tests. Professional services proposed at \$175/hour under an agreed cap. Third-party licenses, taxes and custom development are excluded.

What the production packages target

Guided onboarding, project and task management, schedules, risk registers, financial governance, controlled SOPs, training, portfolio insights, and Word/PowerPoint reports. Essential identity and access controls are release requirements. Core workflows do not require AI.

Availability and terms

Working pricing proposal, not a binding offer or production availability announcement. The current public demo uses synthetic data and browser-local storage. Production authentication, shared data, backups and support must pass acceptance. Business-hours support is proposed; no uptime SLA is offered. Pilot and implementation are separate from recurring fees.
